Double layer (surface science) - Wikipedia A double layer (DL, also called an electrical double layer, EDL) is a structure that appears on the surface of an object when it is exposed to a fluid.The object might be a solid particle, a gas bubble, a liquid droplet, or a porous body.The DL refers to two parallel layers of charge surrounding the object. The first layer, the surface charge (either positive or negative), consists of ions ... Titanium Dioxide as a Catalyst Support in Heterogeneous ... The lack of stability is a challenge for most heterogeneous catalysts. During operations, the agglomeration of particles may block the active sites of the catalyst, which is believed to contribute to its instability. Recently, titanium oxide (TiO<sub>2</sub>) was introduced as an alternative support material for heterogeneous catalyst due to the effect of its high surface area stabilizing the catalysts ...
